Maintain Compliance, Minimize Asset Downtime

Minimizing downtime and maintaining compliance of key assets is vital to driving the most profit from your retail or fleet fuel sites, including your convenience stores and other revenue-generating assets onsite. Without proper continuous compliance and asset management, fuel site operators and owners can be impacted by a number of issues, including increasing maintenance costs, non-compliance fines and unexpected “out of service” costs. Thankfully, at Dover Fueling Solutions® (DFS), we won’t ever leave a potential customer stranded; we’ll never let you drown in mounting service costs. DFS Compliance and Asset Manager (DFS CAM) has been developed specifically to help you optimize your compliance and asset management, so that you’re never left treading water, struggling to keep your business afloat. Our cost-effective solutions reduce your labor costs, improve ROI for all your assets, reduce environmental risk and cost, enable measuring and benchmarking contractor performance to improve efficiency and productivity, and measure performance to ensure KPI’s for your business are exceeded.

When it comes to compliance and asset management, you won’t find a more comprehensive solution. With a robust variety of complete solutions to meet your entire site management needs, we’re here to stop those financial waves from breaking. Grab your surf board. Let’s ride them.

Stay on Top of Your Game

We have partnered with Techniche to bring you DFS Compliance and Asset Manager.

Manage Compliance Legal Obligations

DFS CAM provides you with one place to store all compliance documentation, including reminders of approaching compliance deadlines, identification of missing documents from the library, tracking and reducing annual compliance costs.

Improved Asset Optimization and Investment Planning

With DFS CAM, you have access to a central database for all your asset information, which provides easy access to asset count, maintenance costs and performance by site or type, differentiates asset value versus purchase price and identifies which assets are out of warranty.

Increase Operational Efficiency

State-of-the-art work order management and scheduling tools allow you to assign tasks, deploy contractors and technicians, track task progression to minimize downtime and on-time task completion, and monitor performance by site, asset or contractor by region or group.

Uncover the Real Costs of Your Assets

DFS CAM provides accurate lifecycle analysis, allowing you to track total expenditure analysis by contractor, asset, and site across your network, compare original asset purchase price versus the cost to maintain it, and compare asset performance versus how much it's used.

Centralized Visibility

Fuel site and store owners and operators have a common need for a centralized asset database and document library coupled with a task management tool that provides central visibility of all asset related issues, especially maintenance and compliance related expenses.

Various tools that provide solutions to these requirements exist, but they differ in their functional focus, depending on which markets they operate in. They are also designed for the enterprise space so are suited for large organizations only.

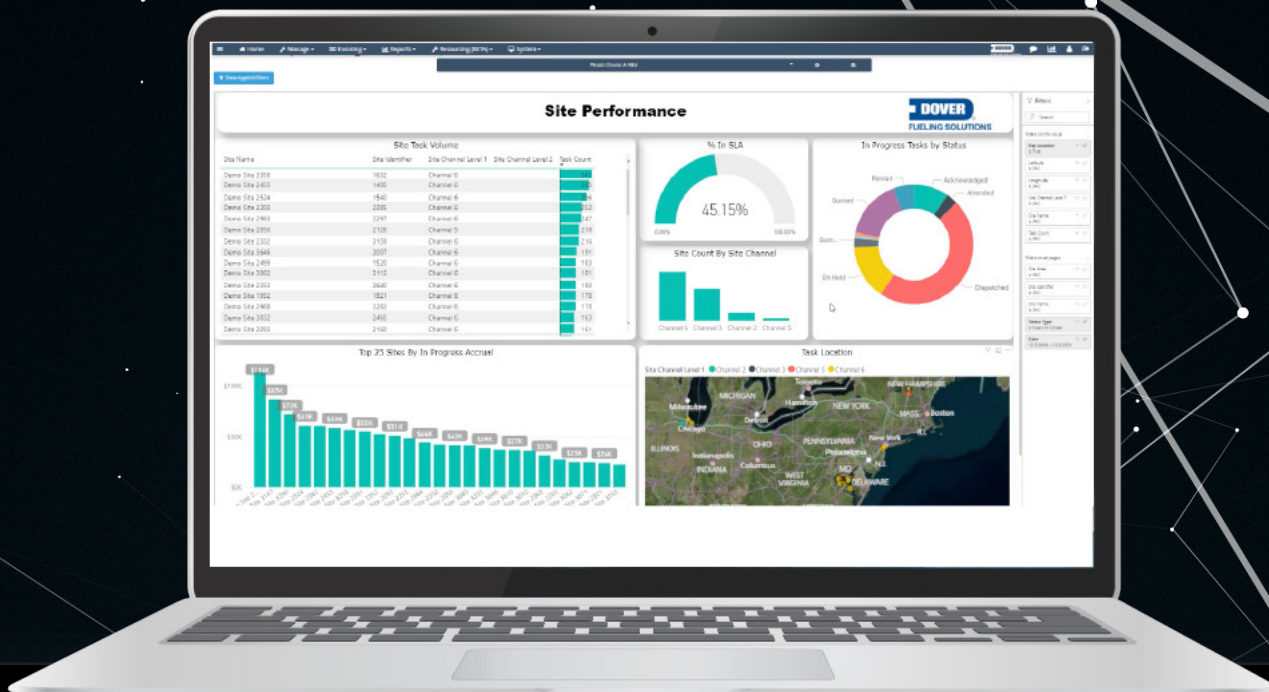

DFS and Techniche worked together to develop a solution based on Techniche's Computerized Maintenance Management Systems (CMMS), the only CMMS provider that specializes in the retail fuel/c-store sector. Combined with DFS' modular approach to compliance and asset management, we provide a solution that fits the small and medium size fuel retailers as well larger retailers.

Suitable for small, medium
& large sized retailers

Centralized asset database
& document library

& compliance-related
expenses

DFS Compliance Manager

Securely store documents that provide visibility to all site-specific compliance, licenses and certifications, as well as regulatory, legal and health & safety documentation — all located in one central library. Automated reminders with pro forma work orders enable you to easily kick off the workflow. This ensures compliance tasks are carried out for those certificates that are due to expire, leaving plenty of time to arrange for renewal, giving you peace of mind.

This, combined with interactive, comprehensive reports and dashboards, provides true visibility to your compliance status and what it's costing you.

DFS Asset Manager

Manage all assets from the forecourt to the car wash to the c-store, ensuring that you have access to, and can track, the real-world performance and health of your assets and realize true ROI. DFS Asset Manager enables you to assign tasks, deploy contractors and technicians, manage work orders and track progression. You and your service partners can increase both efficiency and effectiveness by automatically receiving notifications and reminders for tasks. With the mobile app, you can update and create work orders, capture photos and documents, and provide and receive live updates. You can track total task expenditure and monitor performance by site, contractor and asset, which includes downtime and lifecycle analysis.
