We Like Making Life Easier

At Dover Fueling Solutions® (DFS), we understand every forecourt is a unique combination of specialized hardware and software. While we're a trusted leader in equipment for fuel dispensing, wetstock management and many other parts of a forecourt, we can also help with the little, everyday conveniences that build brand and customer loyalty – like making it easy for customers to clean their windshields after they finish fueling up.

With the Wayne Century® 3 windshield fluid dispenser, we've created an environmentally-friendly solution to replenish a vehicle's windshield fluid whilst on the go. Windshields are always getting dirty – whether from fingerprints, water marks, or insects – so we've developed a solution that allows customers to quickly clean their windshields, with a minimal amount of time, waste and less impact on the environment, due to reduced use of plastics.

Controlled Measurement of Windshield Fluid

Market-Leading Accuracy

DFS' piston meter technology accurately measures out the amount of fluid required to fill your tank, meaning you only pay for the amount of fluid you need at any one time.

Minimises Spillage

Overfilling and spillage issues that are typically experienced when using plastic bottles to refill windshield fluid tanks are eliminated, thanks to the dispenser's Elaflex nozzles, which make it more intuitive to fill the vehicle's fluid tank.

Reduces Plastic Waste

The Century 3 windshield fluid dispenser helps the motorist to reduce their carbon footprint by minimizing the need to purchase single-use plastic bottles to refill their windshield fluid tank.

Technical Specifications

Orientation: Island (Pressure)

Grades Available: 1

Nozzles Available: 1-2

Flow Rates Available: 10 LPM

Hose Management:

Hose Mast - 4.3m reach

Hose Hook - 4.3/9m reach

Options: Extended range of options available

Size:

Hook - 666 (L) x 599 (W) x 1480 (H)

Mast - 666 (L) x 599 (W) x 2134 (H)
